

New generation pellet burner - provides greater safety and efficiency

PellX P21
Pellet burner 10-25 kW

pellix[®]
heating

PellX P21 is an efficient and robust pellet burner for private houses. With regard to long life expectancy and low maintenance costs, the burner has a compact design with few moving parts. The forward directed flame provides the best combustion conditions. It also simplifies

the installation and suits most furnaces on the market. PellX P21 is equipped with reliable warm air ignition and has safety devices that correspond to all current demands on fire and electrical safety.

Improved functions

- Newly developed electronic control:
Separated from the burner for increased safety.

16-bites RISC-processor with larger capacity - easier to adjust, higher reliability.

Built-in flash memory - maintains programme settings and safety functions in case of power failure .
- Higher stability.
- Quick release fasteners for better access.
- Extra 230 V socket for ash screw.
- Prepared for GSM alarm transmitter.
- Prepared for inlet of external air.

Technical data

Heat output	10-25 kW
Combustion efficiency	approx. 90 %
Power supply	230 V, earth
Power consumption	approx. 40 W

Dimensions (outside the boiler)

Depth	300 mm
Width	225 mm
Height	550 mm
Combustion chamber pipe:	
- length	200 mm
- diameter	156 mm
Weight	15 kg

Delivery

The PellX burner is delivered complete with control panel and a 1.7 m long feed screw. If any other screw lengths or other pellet heating equipment are required, contact your local PellX-dealer or Gordic Environment AB.
